

Result

啥鬼？

```
let str_num = "2023".to_string();
let num = str_num.parse::<i32>(); // TS => parseInt(str_num)

println!("{}", &num);
```

```
error[E0277]: `Result<i32, ParseIntError>` doesn't implement `std::fmt::Display`
--> src/main.rs:5:20
   |
5  |     println!("{}", &num);
   |     ^^^^^^^^^^^^^^^^^^^^^ `Result<i32, ParseIntError>` cannot be formatted with
the default formatter
```

Result

用 match 順便處理錯誤

```
let str_num = "2023".to_string();  
let num = str_num.parse::<i32>();  
let num = match num {  
    Ok(v) => v,  
    Err(_) => panic!("GG"),  
};  
  
println!("{}", &num);
```

Output => 2023
