

# Result

## 用 match 順便處理錯誤

```
let str_num = "2023".to_string();  
let num = str_num.parse::<i32>();  
let num = match num {  
    Ok(v) => v,  
    Err(_) => panic!("GG"),  
};  
  
println!("{}", &num);
```

Output => 2023

# Result

你也可以直接 Unwrap 省行數

```
let str_num = "2023".to_string();  
let num = str_num.parse::<i32>();  
let num = num.unwrap();  
  
println!("{}", &num);
```
