

# Match

Not for Typescript. But I love this.

Rust

```
let res = match x {  
    true => "good",  
    false => "bad",  
};
```

# 函式

## Function? Fn!

TypeScript

```
function foo(a: number, b: number): number {  
    return a + b;  
}
```

Rust

```
fn foo(a: i32, b: i32) -> i32 {  
    a + b  
}
```
